Nagoya University	Indonesia	Excellent	I want to get to know other than my field while I got the opportunity to study in Japan. As I am from developing countries, there will be a lot of knowledge and insight can be learned from Japan.	I am very happy that Nagoya Ryunet held event like this. I even had the opportunity to listen from Prof. Hidetaka Tanaka explain all the things related to space works. I might be able to go there by myself, but I will not get opportunity to learned from expert like this. I was very lucky that I am included as participant. Thank you to all Sensei. I am very grateful for all the joy, new friend, and experience I got from Nagoya Ryunet event.	The event already well prepared. Thank you in advance.

Nagoya University	Ethiopia	Very Good	I have studied Aircraft Avionics maintenance during my undergraduate studies and worked for Ethiopian Airlines for 2 years so this was an interesting experience to see aerospace and aviation development in Japan.	Overall the event was very good. It was well organised and there was explanations by professors as well. I enjoyed the event. Thank you.	I feel like the time was a bit short as there was so many things to explore at the museum.

Nagoya University	Canada	Excellent	I love rockets and outer space, and I am interested in aircraft as well, so I wanted to see the museum :)	I really enjoyed the event! Seeing the museum was enjoyable and having the lecture from the first gentleman on the bus was quite good as well! Also, it was fun to learn more about the ISS on the bus ride :) I found the other set of notes about the planes was a bit odd though. Since there was another gentleman there who had experience with planes, I was expecting that he would present about planes, however, there was no such discussion, so it was a bit interesting to be given notes that were not really discussed. Still, it was quite nice having both of them there because we could ask questions while we walked around the different levels of the museum. it was really a great time! :D	I really loved the visit! It was a great time! However, maybe be a bit more careful when using the microphone on the bus? I think it's possible the microphone moved away from the speaker's mouth while riding the bus in the morning, so it was difficult to hear what was being said sometimes sadly. Also, if there will be a short lecture on the bus or notes will be handed out, it might be helpful to let the participants know in advance so we can prepare something to write with or on maybe. This was a lot of fun though!

Nagoya University	モンゴル	Excellent	My main reason why I participated in this program is that i haven't ever visited in this kind of facilities in my entire life-time. I can't say I am a kind of person who loves aero science. But I wanted to see the museum once. Also I had participated Nagoya Ryugakusei Net's event before, so I know the events of Ryugakusei Net are really interesting, well-organized, and have good quality.	My impressions of this event is just an awesome. Before I participate in this program, I have not known about space and airplane at all. But after I saw so many things such as inside of spacecraft (Kibo) by my own eyes, I am really interested in Aero science. The professors who explained that museum were so knowledgeable about their profession and also very kind when they are guiding. Thank you for all of Nagoya Ryugakusei Net's members.	
Nagoya University	Thailand	Very Good	Acquiring knowledge regarding Japan's role in Aerospace activities	Well managed, nice tour guides	
Nagoya University	Iran	Excellent	I love airplanes and the subjects related to space. Also, my friend's relative works in the museum so going to this museum was recommended to me before.	I really liked how we were accompanied by professors and professionals who giuded us throughly during the tour. Everyone was very kind and the timing and everything was precise. The museum itself was amazing. I had a fantastic experience so thank you very much.	

Nagoya University	中国	Excellent	To learn from the expert(Professor Hidetaka TANAKA) who have worked with NASA	Aerospace stands as the epitome of technological advancement. While only a select few astronauts may shine as true stars, there exists a diverse cadre of aerospace scientists and professionals toiling behind the scenes, bolstered by an extensive community of scientists and enthusiasts. It's akin to a pyramid: scaling its peak requires a formidable lineup of skilled individuals. The challenge lies in cultivating and attracting talent to bolster this lineup.
