

Affiliation	Country	Checkbox	Goals	Impressions about the Event	Suggestions
Nagoya University	Mongolia	Excellent	I was interested in exploring the work environment of a Japanese company. Additionally, I was wanted to know how gas supply works in Nagoya as households seemed to have at least one thing that works with gas.	Like all the other events organized by Nagoya Ryugakusei Net, the event started on time and ended on time. It was an experience to be able to sit in the emergency conference room (if I understood it correctly). The explanation given by the staff was good, even though I did not know about the topic beforehand, I could understand it quite well thanks to their detailed explanation. I am happy to have participated in the event.	
Nagoya University	Myanmar	Excellent	As Toho has is one of the main gas company in Japan, I'd like to know how they conduct their systems.	The events conducted by Nagoya Ryu Net offers something to widen our knowledge concerning Japan. The authorities and staff of Toho gas company well-prepared for their knowledge-sharing as well as warmly welcomed the students.	
Nagoya University	China	Excellent	Further understanding Japan.	The overall event was impressive. Through this event, I gained further understanding of Japan's energy supply and earthquake emergency response systems, which also provided certain benefits to my project. However, a slight drawback was that this event was mainly held in office areas; I look forward to visiting more work scenes in the future.	

Nagoya University	Uzbekistan	Excellent	<p>I was interested of Gas Supply System works in Japan.</p>	<p>I learned a lot from this event. I usually spend my time learning and studying about law and legislation. For this reason, I don't have a lot of opportunities to see how infrastructure system works, particularly, how natural gas is supplied to cities.</p> <p>This event was very informational and interesting for me. I could see how gas is supplied, how pipelines are build, how Toho Gas take preventive measures in case of earthquake or tsunami, how Toho Gas is using modern IT and AI in their system. Also, visiting the headquarters of Toho Gas gave an opportunity to see the field, workers of company.</p> <p>We heard a presentation about Toho Gas, after which we could ask questions and got answers from field workers.</p> <p>Last time we visited water suppliers in Gifu, this time gas suppliers in Nagoya. Participating at these events gave me an opportunity to get in touch with "real social systems," which is different from what I study in books. I believe, these kind of events further my research in the field of law as well, as seeing and feeling the "system" gives clearer image of what is important in research and to which points I should pay attention.</p>

Nagoya University	Sri Lanka	Excellent	I want to explore Japanese energy policy and how gas facility providers work in challenging environments.	I was surprised about the Toho gas company's journey because they are young but are the leading gas company in the Tokai area. The officials of the company answered our questions very kindly and patiently. They provided very informative details about the Japanese energy sector, the Toho gas facility, and how they responded to the disaster. I was impressed that they expanded their business to the bakery sector.	This program is well organized and informative; it is a study tour for me. I love to participate in every event of this program.
Nagoya University	Bhutan	Excellent	I wanted to know more about Japan's energy sector	It was really eye opening for us. Moreover, coordinators and staffs at Toho gas company were very generous to answer our questions. Thank you	
Nagoya University	Indonesia	Very Good	I am interested on energy supply in Japan	The company very well prepared for the material and give many knowledges, especially at Q&A session.  Toho Gas staff are so friendly, welcome and try the best to inform all audiences.	It will be good when the duration of field check make longer. The rest of event is very informative.

Nagoya University	Vietnam	Excellent	<p>I have participated in NPO events many times, and each event was carefully organized and exciting, which helped me understand more about Japanese culture and economy. This time, being able to attend an event to learn more about the operations of a private company, Toho Gas, will help me gain more exciting information about this field. Therefore, I decided to participate.</p>	<p>Attending the "Explore Japan: Japan's Energy Facilities Part I" event brought me many exciting experiences. Firstly, with the thoughtfulness and care of Professor Matsuura, Itsuko, and other event supporters, we were meticulously guided according to the detailed planned schedule. Second, I visited Toho Gas's headquarters, saw how the company operates, understood advanced technologies, and learned how the company prevents and resolves situations that arise in reality related to energy systems across Japan, such as high-pressure pipelines and earthquakes. The company also has an emergency security center and a supply disaster prevention center, providing and ensuring a stable supply and safeguarding of gas 24 hours a day, 365 days a year. In Vietnam, we do not have this system; gas is transported in small gas tanks and transported directly to people's homes. Japan used to use this method, but like Matsuura sensei said, in some aspects, it has disadvantages regarding distance and safety.</p>	<p>I don't have any suggestions. Thank you so much for holding this event. I am looking forward to attending the next events.</p>
-------------------	---------	-----------	--	--	---

名古屋大学	中国	Excellent	<p>To gain a profound understanding of how cities operate in Japan.</p>	<p>My impressions of this event are shaped by a profound appreciation for the dedicated professionals who work diligently behind the scenes to ensure the safety of the gas we use in our daily lives. These unsung heroes play a vital role, particularly in handling unforeseen circumstances such as earthquakes and accidents. I am truly grateful for their unwavering commitment.</p> <p>Personally, what captures my attention the most is the sophisticated information management system. Much like the intricate workings of an Apple Watch, real-time monitoring, visualization, and predictive modeling highlight the pivotal role of innovation in safeguarding our communities.</p>

Nagoya University	Indonesia	Excellent	This event is an opportunity to get to know more about Japanese company, also I can interact with other international student who also joined this event. I can get a lot of information and knowledge from the gas company.	I am very satisfied with how the event is well organized. Also, the company allowed us to learn and experience a lot of things.	I hope that I can join another event and perhaps that there will be another company or other field can be visited so international student can learn and gain a lot of knowledge practically in Japan.
